

1. Executive Summary

This report summarizes the current security status of the InteliSecure monitored network. The system detected **13** active threat(s), with **4** critical alert(s) requiring immediate attention. The current security score is **53/100** — Risk Level: **High**.

Metric	Value
Total Logs Collected	589
Active Threats	13
Critical Alerts	4
Security Score	53 / 100
Risk Level	High

2. Active Security Alerts

#	Threat Type	Severity	Source	Timestamp
1	Brute Force Attack	Critical	192.168.1.105	2026-06-03 18:25:42
2	Port Scan	High	10.0.0.55	2026-06-03 18:25:42
3	Unauthorized File Access	Medium	guest_user	2026-06-03 18:25:42
4	Blocked USB Device	High	employee12	2026-06-03 18:25:42
5	Brute Force Attack	Critical	192.168.1.105	2026-06-03 17:59:24
6	Port Scan	High	10.0.0.55	2026-06-03 17:59:24
7	Unauthorized File Access	Medium	guest_user	2026-06-03 17:59:24
8	Blocked USB Device	High	employee12	2026-06-03 17:59:24
9	Brute Force Attack	Critical	192.168.1.105	2026-06-03 17:09:15
10	Port Scan	High	10.0.0.55	2026-06-03 17:09:15
11	Unauthorized File Access	Medium	guest_user	2026-06-03 17:09:15
12	Blocked USB Device	High	employee12	2026-06-03 17:09:15
13	Brute Force Attack	Critical	192.168.1.175	2026-06-01 22:51:43

3. Security Score Breakdown

Factor	Count	Penalty Applied	Max Penalty
Failed Login Attempts (24h)	15	-30	-30
Malware Events (24h)	0	-0	-25
Port Scan Sources (1h)	1	-3	-20
Unauthorized File Access (24h)	2	-4	-15

Active Critical Alerts	4	-10	-10
------------------------	---	-----	-----

4. Priority Recommendations

P1 — Critical

- **Block Scanner IP at Perimeter Firewall:** Immediately drop all traffic from the scanning IP using firewall rules.
- **Audit User Permissions Immediately:** Review the affected user's access rights and revoke any permissions exceeding job requirements.
- **Block Offending IP Address:** Add the source IP to the firewall blocklist immediately. This stops the ongoing attack.
- **Enable Multi-Factor Authentication (MFA):** MFA makes stolen passwords useless. Enable on all accounts, especially admin and remote access.
- **Interview the Involved Employee:** Contact the user immediately to determine intent — accidental or deliberate policy violation.

P2 — High

- **Audit Open Ports and Services:** Run a service audit — close any ports that are not required for business operations.
- **Enable IDS/IPS Port Scan Detection:** Configure your intrusion detection system to alert on future port scans in real-time.
- **Temporarily Suspend User Account:** Suspend the account pending investigation to prevent further unauthorized access.
- **Review Surrounding User Activity:** Examine the user's full activity log for the past 24 hours for additional anomalies.
- **Set Account Lockout Policy:** Configure accounts to lock after 5 consecutive failed attempts with a 15-minute cooldown.
